

Jammertest 2022 and 2023

Andøya, Norway

Mika Saajasto and Maija Mäkelä, FGI-NAVI

The Plan, Data, and devices

- What are you going to measure?
 - Plan test cases early
 - Make a dry run of the tests so you know everything will work
- Devices
 - What devices you need?
 - If possible, don't make updates to the devices on the last minute
- What will you do if something breaks while on the go?
 - Spare devices? (cables, splitters etc.)
- Getting there?
 - Official documents
 - How are you going through customs and airport security?

Traveling

- How are you going to travel?
 - Ground?
 - Plane?
 - How to pack things?
 - Is the thing allowed on plane?
 - Airport security?
 - Or should you ship the stuff there after all?

Hint: Start planning early, preferably yesterday!

- Where are you going to travel?
 - Outside of Finland?
 - SPAN IMU is export controlled, exportation likely requires a few months of paperwork...
 - Outside of EU?
 - ATA Carnet for customs

Jammertest: There and back again

Test area

- All tests run by the FGI during Jammertest 2022 done within the town of Bleik
- We travelled light
 - Limitations on equipment

DATA collection

Aim: Collect data for a research project funded by the Academy of Finland, Resilience and Security of Geospatial Data for Critical Infrastructures (REASON)

- Measurements that are compatible with the FinnRef network
- Measurements that can be replayed in laboratory conditions using other receivers
- Equipment should be as light as possible

Novatel

Some results

Spoofing:

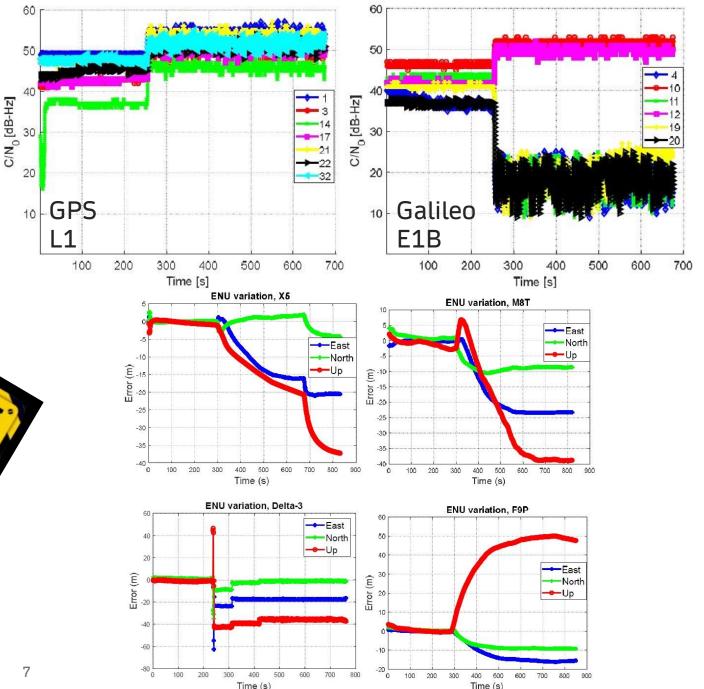

- test the behaviour of various receivers under simulated and live conditions
- Difference in CNO values and resolved ENU parameters

Jamming

Signal correlation-based method for jamming detection and classification

Automated jamming detection system for FinnRef

 Create a machine learning based method that can use Septentrio 'burst' data products

Jammertest 2023

- FGI is sending a team to Jammertest 2023
- Current plan for experiments still to be decided

Some ideas:

- No flying this time, we'll take the car
- Since we are driving, collect data on the trip (test HAS, OSNMA...)
- LabSat seems like a must
- Collect data with phones?
